

cfg.ini  
↓

Network.py  
\* assembles layers  
& checks dim  
- maintains list of  
bytes & locates  
based on name

[name]  
mod-name  
p1 = ?  
p2 = ?

L1 flow  
- layer instant.  
- params provided  
- params validated

L1	inputs (+xn)	outputs (dxn)
<u>local:</u>		<u>global:</u>
-w: (d x 2+)		expand: (n x n <sup>2</sup> )
-b: (d x 1)		goes in params
(1 x d x 1)		
batch		

flow  
cfg.

list of Named layers  
— each has module name  
& whatever params  
(maybe this is handled by  
a stack class)
